Patent No. 6812339

GENERAL INFORMATION:
Patent No. 6812339

GENERAL INFORMATION:
PLICART: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR PLILNG DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FASTSEQ for Windows Version 4.0

LENGTH: 10550
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9738 CTGGGCACCCCGCTGCCCCCAGACTGGGTGAGGGGGGGACTTTGTGCTCATGTTG 9679

Sequence 225. Application US/10335053
Publication No. US20040241653A1
GENERAL INFORMATION:
APPLICANT: OLARK Blotech, Inc.
TITLE OF INVENTION: Methods for identifying marker genes for cancer;
TITLE OF INVENTION: Wethods for 105/1051
CURRENT APPLICATION NUMBER: US/10/335,053
CURRENT PILING DATE: 2003-03-27
PRIOR PILING DATE: 2003-03-27
PRIOR PILING DATE: 2001-12-31
PRIOR FILING DATE: 2001-12-31
NUMBER OF SEQ ID NOS: 319
SOFTWARE: PatentIn version 3.2

RESULT 10-619-344-1

Sequence 1, Application US/10619344

Sequence 1, Application US/10619344

Sequence 1, Application No. US20040086487A1

SEGUENCE NO. US20040086487A1

GENERAL INFORMATION:

TITLE OF INVERTION: Induction of blood vessel formation through administration of TITLE OF INVERTION: polynucleotides encoding sphingosine kinases

TITLE OF INVERTION WINDER: US/09/970,344

CURRENT APPLICATION NUMBER: US/09/970,516

PRIOR FILING DATE: 2003-07-14

PRIOR FILING DATE: 2001-10-04

NUMBER OF SEQ ID NOS: 6

SOSTWARE: Patentin version 3.1

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
